7. Recommendations	6
8. Conclusion	7

1. Introduction

This Test Summary Report describes the testing carried out on the SauceDemo (Swag Labs) web application. It gives an overview of what was tested, how many test cases were executed, what the results were, which defects were found, and whether the exit criteria defined in the test plan have been met. This report is prepared for the QA Lead and is the final document of this testing cycle.

Item	Details
Project	SauceDemo (Swag Labs) web application
Application URL	https://www.saucedemo.com
Test type	Manual functional testing
Prepared by	Aavash Joshi (QA Intern)
Reviewed by	Rujal Dahal
Test period	22 nd September 2026 to 24 th September 2026
Environment	Google Chrome (latest) on Windows 11
Reference documents	Test Plan, Test Cases, Bug Report

2. Scope of Testing

The following modules were covered during this testing cycle:

- Login: valid and invalid login, blank fields, locked-out user, password masking, logout and direct URL access.
- Products: product list, product details, sorting options and Add to cart.
- Cart: adding and removing products, cart badge count, cart page and Continue Shopping.
- Checkout: information form validation, order overview, item total and tax calculation, Finish and Back Home.
- Menu and Footer: All Items, About, Logout, Reset App State and the social media links.
- Demo users: behaviour of standard_user, locked_out_user, problem_user, performance_glitch_user, error_user and visual_user.

Performance testing, security testing, automation testing and backend or API testing were out of scope, as stated in the test plan.

3. Test Execution Summary

The table below shows the number of test cases executed for each module and their results.

Module	Total	Passed	Failed	Blocked	Not Executed
Login	15	13	2	0	0
Products	12	11	1	0	0
Cart	12	11	1	0	0
Checkout	16	14	2	0	0
Menu and Footer	10	9	1	0	0
Demo Users	14	1	13	0	0
Total	79	59	20	0	0

A total of 79 test cases were executed across six sheets. 59 test cases passed and 20 test cases failed, which gives a pass rate of about 75 per cent. No test case was blocked or left unexecuted. Some defects were found by more than one test case, because the same problem was checked again in the Demo Users sheet. For that reason the 20 failed test cases correspond to 15 unique defects.

4. Defect Summary

A total of 15 unique defects were found and reported in the bug report. The tables below show the defects by severity and by module.

4.1 Defects by Severity

Severity	Number of defects	Remarks
Critical	1	The Finish button does not complete the order for error_user.
Major	10	Main features such as sorting, cart, price and form fields do not work
Minor	4	Wrong images, misplaced layout and slow loading

Severity	Number of defects	Remarks
Cosmetic	0	None found
Total	15	

4.2 Defects by Module

Module	Number of defects
Products	5
Cart	3
Checkout	5
Login	1
Menu	1
Total	15

4.3 Important Defects

The following defects need attention first:

- **BUG_015 (Critical):** For error_user, clicking the Finish button on the Overview page does nothing, so the order cannot be completed at all.
- **BUG_012 (Major):** An order can be placed even when the cart is empty. The application does not check whether the cart contains any product before completing the order.
- **BUG_011 (Major):** For visual_user, the product prices shown in the cart do not match the prices shown on the Products page.
- **BUG_004 (Major):** For problem_user, every letter typed in the Last Name field is written in the First Name field, so the checkout form cannot be filled correctly.
- **BUG_003 and BUG_008 (Major):** Sorting does not work for problem_user, and an error message stating that sorting is broken is displayed for error_user.
- **BUG_014 (Major):** For error_user, the checkout continues to the Overview page even when the Last Name field is empty, without showing any error message.

5. Exit Criteria Evaluation

The exit criteria defined in the test plan have been checked as follows:

Exit criterion	Status	Remarks
All planned test cases are executed	Met	All 79 test cases were executed
Results are recorded and defects are logged	Met	Results recorded in the test case sheets and 15 defects logged in the bug report
No Critical or High severity defect remains open	Not met	1 Critical and 10 Major defects are still open and waiting to be fixed
Test summary report is prepared and shared	Met	This report has been prepared and shared with the QA Lead

Since the Critical and Major defects are still open, the application is not yet ready to be treated as fully tested and released. A retest is required after the defects are fixed.

6. Observations

- Most of the defects were found while testing with `problem_user`, `error_user` and `visual_user`. The features worked correctly for `standard_user`.
- The defects are mainly in the Products, Cart and Checkout modules, which are the most important modules for an e-commerce website.
- The application does not validate the cart before completing an order, which allows an empty order to be placed.
- The Reset App State option clears the cart but does not reset the product buttons, so the page shows an incorrect state to the user.
- No defect was found in the Login module for `standard_user`, and all the error messages were displayed correctly.
- Thirteen of the fourteen test cases in the Demo Users sheet failed, which shows that the application behaves correctly only for `standard_user`.

7. Recommendations

- Fix the Critical defect in the checkout flow first, as it blocks the main function of the application.
- Add proper validation on the checkout form so that the order cannot continue when a required field is empty or when the cart is empty.
- Correct the sorting, price and product image issues in the Products and Cart modules.

- Retest all the failed test cases and perform regression testing on the related modules after the fixes.
- Add test cases for mobile responsiveness and other browsers in the next testing cycle.
- Capture a screenshot for the performance defect (BUG_006), which is the only defect without one.

8. Conclusion

Testing of the SauceDemo web application was completed within the planned period. All 79 test cases were executed and 15 unique defects were reported, of which one is Critical and ten are Major. The main flow of the application works correctly for standard_user, but several modules do not work correctly for the other demo users, and an order can be placed with an empty cart.

Because Critical and Major defects are still open, the application does not meet all the exit criteria at this time. The testing cycle can be closed only after these defects are fixed and verified through retesting and regression testing.
